

Automation gone silent?

Is your automation system not working as it should, and you have no audio output?

1. Open VNC Viewer on the desktop
2. Make sure ATM (automation) is selected, and press 'connect'
3. When prompted for a password, enter 'Purple12'
4. More often than not, you just need to press play on the screen
5. Sometimes, multiple outputs will play (so multiple songs at once – just pause and eject and repeat this until only 1 song plays).
6. Fixed!

If it's not fixed, call Matt.
